# 0 Summary

## 0.1 Technical Report Summary

#### Type of Authorization

Certification for an Intentional Radiator (Frequency Hopping Spread Spectrum and Digital Device / Spread Spectrum).

#### **Applicable FCC Rules**

Prepared in accordance with the requirements of FCC Rules and Regulations as listed in 47 CFR Ch.1 (10-1-09 Edition).

The following parts and subparts are applicable to the results in this test report.

- Part 2, Subpart J Equipment Authorization Procedures, Certification
- Part 15, Subpart C and E Intentional Radiators
- § 15.205 Restricted bands of operation
- § 15.209 Radiated emission limits; general requirements
- § 15.247 Operation within the bands 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz
- § 15.407 General technical requirements

#### Note:

The tests are performed with reference to the FCC Public Notice DA 00-705, released March 30, 2000 (related to the Bluetooth part) and the FCC measurement guide line "Measurement of Digital Transmission Systems Operating under Section 15.247 March 23, 2005" (related to the WLAN part).

Instead of applying ANSI C63.4-1992 which is referenced in the FCC Public Note, the newer ANSI C63.4-2003 is applied.

#### **Summary Test Results:**

The EUT complied with all performed tests as listed in chapter 0.2 Measurement Summary.

# 2 Test object Data

#### 2.1 General EUT Description

**Equipment under Test**Bluetooth / WLAN transceiver

Type Designation: ELF

Kind of Device: Handheld Mobile Computer (PDA) incorporating

(optional) Bluetooth radio application
Voltage Type: AC / DC (of AC/DC converter) /

DC (internal battery)

**Voltage level:** 120 V / 5.0 V / Li-Ion 3.7 V / 3 Ah **Modulation Type:** Bluetooth: GFSK, 8DPSK,  $\pi/4$  DQPSK

WLAN: BPSK, DQPSK, QPSK, 16-QAM, 64-QAM,

CCK

#### General product description:

Bluetooth is a short-range radio link intended to be a cable replacement between portable and/or fixed electronic devices.

Bluetooth operates in the unlicensed ISM Band at 2.4 GHz. In the US a band of 83.5 MHz width is available. In this band, the Bluetooth technology defines 79 RF channels spaced 1 MHz (2402 - 2480 MHz). The actual RF channel is chosen from a pseudo-random hopping sequence through the 79 channels. A channel is occupied for a defined amount of time slots, with a nominal slot length of 625  $\mu$ s. The maximum time slot length on one channel is defined by the packet type and is 0.625 ms for DH1 packets, 1.875 ms for DH3 and 3.125 ms for DH5. The nominal hop rate is 1600 hops/s for DH1, 1600/3 for DH3 and 1600/5 for DH5. All frequencies are equally used. The maximum nominal average time of occupancy is 0.4 s within a period of 79\*0.4 seconds.

The basic data rate of 1 Mbps uses GFSK modulation and the enhanced data rate uses PSK modulation. For the enhanced data rate of 3 Mbps 8DPSK modulation and of 2 Mbps  $\pi/4$  DQPSK modulation is used.

The WLAN transceiver operates in the 2.4 GHz ISM band using Direct Sequence Spread Spectrum (DSSS) Modulation. The EUT supports the modes 802.11b (maximum data rate 11 Mbps), 802.11g (maximum data rate 54 Mbps).

The WLAN transceiver operates also in the 5 GHz U-NII high performance RLAN subbands 5150 MHz to 5350 , 5470 MHz to 5725 MHz and 5725 MHz to 5850 MHz. The EUT supports the mode 802.11a (maximum data rate 54 Mbps).

#### Specific product description for the EUT:

The EUT is a handheld mobile computer (PDA) which uses Bluetooth and WLAN technology to setup radio links to other devices.

#### The EUT provides the following ports:

#### **Ports**

Temp antenna connector Enclosure USB Port (connectable to AC power line) System Connector (to Cradle)

The main components of the EUT are listed and described in Chapter 2.2.

### 2.2 EUT Main components

#### Type, S/N, Short Descriptions etc. used in this Test Report

| Short<br>Description          | Equipment under Test     | Type<br>Designation | Serial No. | HW Status | SW Status | Date of<br>Receipt |
|-------------------------------|--------------------------|---------------------|------------|-----------|-----------|--------------------|
| EUT A<br>(Code:<br>EX005fc05) | Bluetooth<br>transceiver | ELF                 | D10P00131  | 1.0       | 1.0 RC3   | 2010-04-22         |
| Remark: None                  | ٠.                       |                     |            |           |           |                    |

NOTE: The short description is used to simplify the identification of the EUT in this test report.

# 2.3 Ancillary Equipment

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Ancillary Equipment can influence the test results.

| Short       | Equipment  | Type        | HW Status | SW Status | Serial no. | FCC ID |
|-------------|------------|-------------|-----------|-----------|------------|--------|
| Description | under Test | Designation |           |           |            |        |
| _           |            |             |           |           |            |        |

# 2.4 Auxiliary Equipment

For the purposes of this test report, auxiliary equipment is defined as equipment which is used temporarily to enable operational and control features especially used for the tests of the EUT which is not used during normal operation or equipment that is used during the tests in combination with the EUT but is not subject of this test report. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Auxiliary Equipment can influence the test results.

| Short       | Equipment  | Type        | Serial no. | <b>HW Status</b> | SW Status | FCC ID |
|-------------|------------|-------------|------------|------------------|-----------|--------|
| Description | under Test | Designation |            |                  |           |        |
| _           |            |             |            |                  |           |        |

Test report Reference: MDE\_Datal\_0901\_FCCg

#### 2.5 EUT Setups

This chapter describes the combination of EUTs and ancillary equipment used for testing.

| Setup No. | Combination of EUTs | Description                     |
|-----------|---------------------|---------------------------------|
| Setup_01  | EUT A               | setup for radiated measurements |

## 2.6 Operating Modes

This chapter describes the operating modes of the EUTs used for testing.

| Op. Mode      | Description of Operating Modes                              | Remarks                           |
|---------------|---|-----------------------------------|
| op-mode 1-co  | The EUT transmits on 2402 MHz (Bluetooth) + 2462 MHz (WLAN) | BT 1 Mbps + WLAN 802.11g / 6 Mbps |
| op-mode 6-co  | The EUT transmits on 2402 MHz (Bluetooth) + 5260MHz (WLAN)  | BT 3 Mbps + WLAN 802.11a / 6 Mbps |
| op-mode 12-co | The EUT transmits on 2480 MHz (Bluetooth) + 2412 MHz (WLAN) | BT 2 Mbps + WLAN 802.11b / 1 Mbps |

Remark: All modes are set locally at the EUT.

#### 2.7 Product labelling

#### 2.7.1 FCC ID label

Please refer to the documentation of the applicant.

#### 2.7.2 Location of the label on the EUT

Please refer to the documentation of the applicant.

### 3 Test Results

#### 3.1 Spurious radiated emissions

Standard FCC Part 15, 10-1-09 Edition Subpart C and E

The test was performed according to: ANSI C 63.4, 2003

#### 3.1.1 Test Description

The test set-up was made in accordance to the general provisions of ANSI C 63.4-2003. The Equipment Under Test (EUT) was set up on a non-conductive table  $1.0 \times 2.0 \text{ m}$  in the semi-anechoic chamber. The test was performed at the distance of 3 m between the EUT and the receiving antenna.

The radiated emissions measurements were made in a typical installation configuration. The measurement procedure is implemented into the EMI test software ES-K1 from R&S.

#### 1. Measurement up to 30 MHz

The test set-up was made in accordance to the general provisions of ANSI C 63.4-2003. The Equipment Under Test (EUT) was set up on a non-conductive table in the anechoic chamber.

The radiated emissions measurements were made in a typical installation configuration. The measurement procedure is implemented into the EMI test software ES-K1 from R&S. The Loop antenna HFH2-Z2 is used.

#### Step 1: pre-measurement

- Anechoic chamber
- Antenna distance: 10 mDetector: Peak-Maxhold
- Frequency range: 0.009 0.15 and 0.15 30 MHz
- Frequency steps: 0.1 kHz and 5 kHz
- IF-Bandwidth: 0.2 kHz and 10 kHz
- Measuring time / Frequency step: 100 ms

Intention of this step is, to determine the radiated EMI-profile of the EUT. Afterwards the relevant emissions for the final measurement are identified.

#### **Step 2:** final measurement

For the relevant emissions determined in step 1, an additional measurement with the following settings will be performed. Intention of this step is to find the maximum emission level.

- Open area test side
- Antenna distance: according to the Standard
- Detector: Quasi-Peak
- Frequency range: 0.009 30 MHz
- Frequency steps: measurement at frequencies detected in step 1
- IF-Bandwidth: 200 Hz 10 kHz
- Measuring time / Frequency step: 100 ms

#### 2. Measurement above 30 MHz and up to 1 GHz

Step 1: Preliminary scan

Preliminary test to identify the highest amplitudes relative to the limit.

Settings for step 1:

- Detector: Peak-Maxhold
- Frequency range: 30 1000 MHz
- Frequency steps: 60 kHzIF-Bandwidth: 120 kHz
- Measuring time / Frequency step: 100 µs (BT Timing 1.25 ms)
- Turntable angle range: -180 to 180°
- Turntable step size: 90°

Height variation range: 1 – 3 m
Height variation step size: 2 m
Polarisation: Horizontal + Vertical

Intention of this step is, to determine the radiated EMI-profile of the EUT. Afterwards the relevant emissions for the final measurement are identified.

#### Step 2: second measurement

For the relevant emissions determined in step 1, an additional measurement with the following settings will be performed. Intention of this step is, to find out the approximate turntable angle and antenna height for each frequency.

- Detector: Peak - Maxhold

- Measured frequencies: in step 1 determined frequencies

IF – Bandwidth: 120 kHzMeasuring time: 100 ms

- Turntable angle range: -180 to 180°

- Turntable step size: 45°

Height variation range: 1 – 4 m
Height variation step size: 0.5 m
Polarisation: horizontal + vertical

After this step the EMI test system has determined the following values for each frequency (of step 1):

- Frequency

- Azimuth value (of turntable)

- Antenna height

The last two values have now the following accuracy:

- Azimuth value (of turntable): 45°

- Antenna height: 0.5 m

#### Step 3: final measurement

In this step the accuracy of the turntable azimuth and antenna height will be improved. This is necessary to find out the maximum value of every frequency.

For each frequency, which was determined the turntable azimuth and antenna height will be adjusted. The turntable azimuth will be slowly varied by +/- 22.5° around this value. During this action the value of emission is continuously measured. The turntable azimuth at the highest emission will be recorded and adjusted. In this position the antenna height is also slowly varied by +/- 25 cm around the antenna height determined. During this action the value of emission is also continuously measured. The antenna height of the highest emission will also be recorded and adjusted.

- Detector: Peak - Maxhold

- Measured frequencies: in step 1 determined frequencies

IF – Bandwidth: 120 kHzMeasuring time: 100 ms

- Turntable angle range: -22.5° to + 22.5° around the determined value

- Height variation range: -0.25 m to + 0.2 5m around the determined value

**Step 4:** final measurement with QP detector

With the settings determined in step 3, the final measurement will be performed: EMI receiver settings for step 4:

- Detector: Quasi-Peak (< 1 GHz)

- Measured frequencies: in step 1 determined frequencies

IF – Bandwidth: 120 kHzMeasuring time: 1 s

#### 3. Measurement above 1 GHz

The following modifications apply to the measurement procedure for the frequency range above 1 GHz:

The measurement distance was reduced to 1 m. The results were extrapolated by the extrapolation factor of 20 dB/decade (inverse linear-distance for field strength measurements, inverse linear-distance squared for the power reference level measurements). Due to the fact that in this frequency range a double ridged wave

guided horn antenna (up to 18 GHz) and a horn antenna (18-25 GHz) are used, the steps 2-4 are omitted. Step 1 was performed with one height of the receiving antenna only. EMI receiver settings:

- Detector: Peak, Average
- IF Bandwidth = 1 MHz

After the measurement a plot will be generated which contains a diagram with the results of the preliminary scan and a chart with the frequencies and values of the results of the final measurement.

#### 3.1.2 Test Requirements / Limits

FCC §15.205 (b)

"Except as provided in paragraphs (d) and (e) of this section, the field strength of emissions appearing within these frequency bands shall not exceed the limits shown in § 15.209. At frequencies equal to or less than 1000 MHz, compliance with the limits in § 15.209 shall be demonstrated using measurement instrumentation employing a CISPR quasi-peak detector. Above 1000 MHz, compliance with the emission limits in § 15.209 shall be demonstrated based on the average value of the measured emissions. The provisions in § 15.35 apply to these measurements." FCC §15.209 (a)

"Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:"

#### FCC §15.209, Radiated Emission Limits

| Frequency in MHz | Limit (µV/m) | Measurement distance (m) | Limit(dBµV/m @10m)  |
|------------------|--------------|--------------------------|---------------------|
| 0.009 - 0.49     | 2400/F(kHz)  | 300                      | Limit (dBµV/m)+30dB |
| 0.49 - 1.705     | 24000/F(kHz) | 30                       | Limit (dBµV/m)+10dB |
| 1.705 - 30       | 30           | 30                       | Limit (dBµV/m)+10dB |

| Frequency in MHz | Limit (µV/m) | Measurement distance (m) | Limit (dBµV/m) |
|------------------|--------------|--------------------------|----------------|
| 30 - 88          | 100          | 3                        | 40.0           |
| 88 - 216         | 150          | 3                        | 43.5           |
| 216 - 960        | 200          | 3                        | 46.0           |
| above 960        | 500          | 3                        | 54.0           |

#### FCC §15.35(b)

"..., there is also a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit ..."

Used conversion factor: Limit ( $dB\mu V/m$ ) = 20 log (Limit ( $\mu V/m$ )/1 $\mu V/m$ ) FCC §15.407(b), Undesirable (Radiated) Emission Limits

For the frequency sub-band 5715 - 5825 the following limits apply for peaks which does not fall in any of the restricted bands as defined at 15.205(a). Alternatively, devices may instead comply to Subpart C, § 15.247 in the sub-band 5825 -5850 MHz.

| Carrier Frequency in MHz | EIRP Limit (dBm/MHz) | Measurement distance (m) | Limit (dBµV/m) |
|--------------------------|----------------------|--------------------------|----------------|
| 5150 - 5250              | -27.0                | 3                        | 68.2           |
| 5250 - 5350              | -27.0                | 3                        | 68.2           |
| 5470 - 5725              | -27.0                | 3                        | 68.2           |
| 5725 - 5825              | -27.0                | 3                        | 68.2           |

For co-location scenarios the limit which permits the higher emission applies for simultaneous operation.

#### **Test Equipment Auxiliary Test Equipment**

Lab ID: Lab 1

Manufacturer: see single devices

Description: Single Devices for various Test Equipment

Type: various Serial Number: none

# 5 Setup Drawings

Remark: Depending on the frequency range suitable antenna types, attenuators or preamplifiers are used.

#### **Drawing 1:** Setup in the Anechoic chamber:

Measurements below 1 GHz: Semi-anechoic, conducting ground plane. Measurements above 1 GHz: Fully-anechoic, absorbers on all surfaces
